

Alexander Karamanov is professor at the Institute of Physical Chemistry of the Bulgarian Academy of Sciences. His research interests are related mainly to the theory and application of agglomeration crystallization, kinetics of sintering and crystallization, as well as to the synthesis and characterization of various glass-ceramic and ceramic materials based on industrial inorganic waste. He is author of more than 100 scientific publications, cited more than 2 000 times. Prof. Karamanov is a member of the Committee TC05 "Vitrification of waste" in the International Glass Commission (ICG) and president of the Bulgarian ICG team.
