

CERAMIC INDUSTRY INNOVATIONS. TOWARDS CIRCULAR ECONOMY

Jorge Bakali

Senior Assistant, KALE

The current global economic situation of the world, as well as the important productive adjustments to be able to have a more sustainable economy have introduced the concept of “circular economy”. In other words, it is intended that the value of products, materials and resources is kept within the production system for as long as possible, reducing waste to a minimum.

The ceramic sector has not lagged in incorporating this concept into its production system, although it has been a widely used practice for a long time.

In this keynote, a brief tour of the different sustainability actions in the ceramic sector will be made and some possible lines of work for the immediate future will be proposed, especially in the energy system.
